Milestone:

Machine learning and AI in nutrition analyze raw data to identify competitive traits that are useful for forecasting improved dietary plans. Artificial intelligence and machine learning have become primary components of daily workouts. The project's main aim is to build a model used for classifying the fruit depending on the different characteristics like color, shape, texture. Here the user can capture images of different fruits and then the image will be sent to the trained model. The model analyses theimage and detects the nutrition based on the fruits like (Sugar, Fiber, Protein, Calories, etc.)..

Activity List:

In Project, Management Planning is an Important task for scheduling the phase of the project for the Team Members. This Activity can show the various activity are allocated and done by the Team Members! In Project, we can Split into Four Step of Phases are,

Phase 1: Information Collection and Requirement Analysis.
Phase 2: Project Planning and Developing Modules.
Phase 3: Implementing the High Accuracy Deep Learning Algorithm to Perform.
Phase 4: Deploying the Model on Cloud and Testing the Model and UI Performance
